## FILM DRYER

**ORDER CODE: FI\_DRY1**

With this novel device you can dry your films quickly and safely thanks to an electronic temperature control and three fan levels.

Up to 6 sheets of 8x10 inch films or 12 films of any size between 4x5 inches and 35mm can be dried simultaneously.

The films are protected against dust during drying by an air bag made of high-quality transparent PVC film. Two zippers allow the complete opening of the air bag and simplify the insertion and removal of the films.

The air is sucked in through an integrated filter at the top, heated and blown in the direction of the films. The powerful heater brings the air to its nominal temperature in a very short time. The integrated thermostat and a mixing chamber create a gentle and evenly distributed air flow.

### Benefits

- Safe film drying without drying marks
- Compact design
- Universally applicable to different film sizes
- Exchangeable high-quality air filter

### Technical data

- Base area: 310x260 mm
- Length of the dry bag: 1.8 m
- Max. power consumption: 1200 W
- Supply voltage: 180 ... 250 V or 90 ... 125V
- Weight: 8 kg
- Room temperature range: 15° ... 30° C
- Film sizes: 35mm up to 8x10 inches
