SPLITGRADE PAPER FLASHER

ORDER CODE: SPL-PAPFLASH

With this Splitgrade accessory, high negative contrasts can be managed more easily, and details in the lights are improved without significantly affecting the shadow details. See also

<http://www.lesmcleanphotography.com/articles.php?page=full&article=27>

The light source is installed near the lens or on a lens cap and connected to your Splitgrade system via an adapter. Now you can pre-expose photo paper in certain areas or completely without removing the negative or you can use a suitable mask to expose a black border.

With the green pre-exposure the photo paper is sensitised in the lights without fogging the paper. To determine the correct exposure, a test strip mode is built into the Splitgrade software.

The following exposure immediately produces a visible tone on the paper even in the darkest negative areas.

This technique can be applied either to the entire image or by suitable masking in certain areas.

Benefits

- The negative does not have to be removed for pre-exposure or post-flashing
- Easy installation
- Homogeneous, diffuse light source with 4 green LEDs
- Available for existing Splitgrade systems from series 03 onwards
- Always ready to use, since non-battery operated
- Integrated test strip menu

Technical data

- Size of the light area: 30x30 mm
- Weight: 50g
- Power supply: By Splitgrade
- Time range: 0,1..300s
